EXPERIENCE

Omniful AI

Software Developer

Gurugram, India

July 2025 – Present

- Spearheaded architecture and development of the **Billing Service** for **100+ enterprise tenants**, processing **100K+ billable operational records/month** across orders, shipments, and warehouse receipts (GRNs), with **99.9% uptime**.
- Reduced bill-generation time by **70%** by replacing sequential synchronous processing with an **event-driven fan-out/fan-in workflow** over AWS SQS, using 12+ async workers to fetch data from 11 external services in parallel before computing bills.
- Eliminated per-item **N+1 database queries** through batch fetching and **Redis caching**, reducing redundant database queries by **40%**.
- Owned the **Analytics & Reporting Service**, powering **real-time dashboards and 30+ reports** across 9 business verticals for **100+ tenants**.
- Engineered a **CDC pipeline** (Estuary + Kafka → Tinybird/ClickHouse) ingesting **5M+ events/day**.
- Built a **data consistency alerting system** performing automated reconciliation across MongoDB, PostgreSQL and Tinybird, improving detection time by **95%**.

Omniful AI

Software Developer Intern

Gurugram, India

Jan 2025 – June 2025

- Built a **Go code generator** converting JSON Schemas into typed structs with validation tags, and implemented **JSON Schema Draft 7 validation** for schema files and runtime event payloads.
- Developed a **YAML-backed event registry** tracking event versions and producer/consumer metadata, with a CLI to register new event types end-to-end in a single command.
- Added **Slack support** to the Notification Service, enabling internal services to submit messages through an API for asynchronous worker-based delivery to configured Slack channels.

TECHNICAL SKILLS

- **Languages:** Go (Golang), C++, Python, JavaScript, SQL
- **Frameworks & Runtimes:** Django, Node.js, Express.js, React
- **Databases & Caching:** MongoDB, PostgreSQL, ClickHouse, Redis
- **Messaging & Data:** Kafka, AWS SQS, Tinybird, Estuary
- **Cloud & Tools:** AWS (S3), Docker, Git/GitHub, Linux, New Relic

PROJECTS

PulseLens | Go, Kafka, ClickHouse, Redis | GitHub

May 2026

- Designed a decoupled **microservices architecture** in Go to process multi-tenant telemetry (Logs, Metrics, Traces), ensuring strict data isolation through a centralized Control Plane.
- Built a high-throughput **ingestion pipeline** utilizing Kafka for asynchronous processing and Redis for rate-limiting, optimizing the system for horizontal scalability and low-latency data writes.
- Implemented comprehensive **reliability engineering** practices, including automated chaos drills (Kafka/DB outages) and backup/restore verification to ensure platform resilience under failure.

EDUCATION

Jaypee Institute Of Information Technology

B.Tech in Computer Science | **CGPA: 8.0/10**

Noida, Uttar Pradesh

2021 – 2025

ACHIEVEMENTS

- Top **42/3393** in GeeksForGeeks Job-a-thon 2023
- Achieved **Specialist** rank on Codeforces
- Runner-Up at Hyperverge Hackathon 2024
- Solved **1500+** problems across all coding platforms, including LeetCode
